
Léo Dody

Quantitative Researcher / ML Engineer

leo.dody01@gmail.com • (+33) 681036747 • [LinkedIn](#) • [GitHub](#)

Open to relocation

Summary

Machine Learning Engineer with a PhD background in AI and financial markets, combining applied research, machine learning and quantitative modelling. Experienced in developing end-to-end solutions from large-scale data processing and feature engineering to predictive modelling, optimization and real-time deployment. International research experience in France and Japan, with a multidisciplinary engineering and business background.

Experience

Quantitative Researcher in AI and Finance – Research Center Magellan, Lyon France (Oct. 2023 – Sept. 2026)

- Designed end-to-end data and ML pipelines for large-scale high-frequency data, processing ~2B observations per dataset and engineering 260+ predictive features.
- Developed machine-learning and deep-learning models for time-series forecasting and decision-making, achieving up to 52% out-of-sample directional accuracy.
- Developed reinforcement-learning methods for constrained decision-making, portfolio optimization and trade execution.
- Designed scalable experimentation pipelines for model training, hyperparameter optimization and out-of-sample validation.
- Designed and taught graduate-level courses in market microstructure, and communicated technical research to non-specialist audiences.

Visiting Research Mission – Keio University, Yokohama (Apr. 2026 – Jun. 2026)

- Developed reinforcement learning methods for constrained sequential decision-making and optimization.
- Designed quantitative frameworks translating natural-language guidelines into mathematical constraints for optimization algorithms.

Associate IT Auditor – PwC, Lyon France (Jun. 2022 – Dec. 2022)

- Assessed IT infrastructure, cybersecurity and data risks while collaborating with technical and business stakeholders to communicate actionable findings.
-

Selected Projects

Datafluence Workshop –CIAE, French Armed Forces, Lyon (2025 – 2026, eds 1 & 2)

- Participated in two editions of Datafluence, a French Armed Forces workshop on information warfare and disinformation detection, working in mixed teams of military personnel, industry experts, and academics.
- Built Python-based analysis pipelines combining clustering, NLP, and sentiment analysis to detect coordinated disinformation, examining language patterns, temporal recurrence, and activity spikes across social media data.

Quantitative Trader – Personal Project, Remote (2026 – Present)

- Built and deployed an end-to-end ML system, integrating Python-trained models into a real-time application and running automated inference and execution continuously on a remote server.
-

Education

University Lyon 3 – PhD in AI and Financial Markets (2023 – Expected Dec. 2026)

IAE Lyon – Master in business management (2021 – 2022)

Ecole Centrale de Lyon – Master in Fluid and Energetic Mechanics (2020 – 2021)

Polytech Lyon – Master in Mechanical Engineering (engineer's degree) (2018 – 2021)

Technical Skills

Programming & Tools: Python, C++, SQL, MQL5

Data Science: Statistical Modelling, Large-Scale Experimentation, Sensitivity Analysis, Model Validation, Sequential Data Analysis

Machine Learning: Deep Learning, Reinforcement Learning, Time-Series Forecasting, Feature Engineering

Infrastructure: Linux, Git, HPC, SLURM, AWS

Languages: French (Native) — English (Fluent) — Spanish (Basic) – Japanese (Basic, actively learning)

Publications

Forecasting Stock Prices with Deep Learning & Full Order Book Dynamics, Finance (2026); +2 papers under review
