Open to relocation to Japan • Highly Skilled Professional (HSP) visa eligible (80+ points) • Sponsorship required

Experience

Keio University

Yokohama

Quantitative Research Fellow (visiting) in AI and Finance

Apr. 2026 – Jun. 2026

- Developed reinforcement learning methods for constraint-aware portfolio optimization.
- Designed quantitative frameworks translating natural-language investment guidelines into portfolio optimization constraints.

Research Center Magellan

Lyon

Quantitative Researcher in AI and Finance

Oct. 2023 – Sept. 2026

- Designed quantitative research pipelines for systematic trading on high-frequency equity markets.
- Engineered 260+ market microstructure features describing order flow, liquidity and execution dynamics.
- Developed machine learning models for alpha generation achieving up to 52% directional prediction accuracy on short-term market movements.
- Developed liquidity prediction algorithms identifying execution opportunities and reducing simulated implementation shortfall by up to 248 bps.
- Designed reinforcement learning portfolio optimization algorithms under realistic investment constraints, achieving Sharpe ratios up to 2.3 with 50% lower turnover than unconstrained policies.
- Built scalable experimentation pipelines for model training, hyperparameter optimization and out-of-sample strategy validation.

PwC

Lyon

Associate IT Auditor

Jun. 2022 – Dec. 2022

- Conducted IT audits of client information systems, assessing controls across access management, cybersecurity, data security and IT operations.
- Evaluated IT infrastructure and control risks while collaborating with client IT teams and business stakeholders to gather evidence and communicate findings.

Education

University Lyon 3 – PhD in AI and Financial Markets

Lyon, Expected Dec. 2026

IAE Lyon – Master in business management

Lyon, 2022

Ecole Centrale de Lyon – Master in Fluid and Energetic Mechanics

Lyon, 2021

Polytech Lyon – Master in Mechanical Engineering (engineer's degree)

Lyon, 2021

Technical Skills

Programming & Tools: Python, C++, SQL, MQL5

Quantitative Research: Systematic Trading, Alpha Research, Market Microstructure, Portfolio Optimization, Signal Generation, Execution Modelling

Machine Learning: Deep Learning, Reinforcement Learning, Time-Series Forecasting, Feature Engineering

Infrastructure: Linux, Git, HPC, SLURM, AWS

Languages: French (Native) — English (Fluent) — Spanish (Basic) — Japanese (Basic, actively learning)

Publications

Forecasting Stock Prices with Deep Learning & Full Order Book Dynamics — *Finance* (2026)

Deep Learning & Liquidity Zones in Market Depth — Under review, *The Journal of Risk Finance*

Bridging Natural Language and Forecast-Driven Decision Making — Under review, *Journal of Forecasting*
